Our Bulbs.

Are of the very highest quality, imported direct from the best growers in England, France and Holland. No better are sold in this country.

Remittances.

May be made at our risk by draft, money order, American Express Co.'s money order, cash by express, or registered letter. Postage stamps may be sent for small amounts.

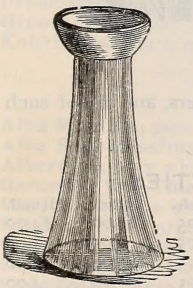
Address, etc.

Purchasers will please be particular in **plainly** signing their **Name, Post-office, County and State,** and mention mode of conveyance, whether by **Mail, Express or Freight.**

Non-Warranty.

We wish it distinctly understood that although our Seeds, Bulbs and Plants are grown for us by experienced growers, in localities best suited for their development, and we take all possible pains to have them pure and reliable, we still give no warranty, express or implied, as to quality, description, productiveness, or any other matter of any of the seeds, Bulbs or Plants we send out, and will not be in any way responsible for the crop. Every order received for articles named in this Catalogue will be executed on these conditions only.

Our Catalogue of Seeds for the coming year will be mailed to all regular customers as soon as issued, to all others on application.



HYACINTH GLASSES.

Hyacinths grown in glasses of water are charming ornaments for parlor windows, and the ease and success in flowering bulbs in this way add greatly to the popularity of not only Hyacinths, but Polyanthus Narcissus, Amaryllis Formosissima and other bulbs, which can be grown in the same manner. Can be used for cut flower vases when desired.

Hyacinths.

GARDEN CULTURE.—The bulbs may be planted from September to December in any good well-drained garden soil, which, however, should be dug at least eighteen inches deep. They should be set six inches apart and four to six inches deep. *Before the ground freezes* cover the beds about six inches deep with leaves or other good litter to keep out the frost. The covering can be kept in place by pieces of boards or boughs and should gradually be removed upon approach of warm weather in Spring. The bulbs should be left until the foliage turns yellow, when they may be lifted, dried off, and kept in a dry cool place for replanting.

CULTURE IN POTS.—Select solid, heavy bulbs and plant as early as possible, using a four or five inch pot for a single bulb. Fill the pots with a light, rich potting soil, and have the top of the bulb just below the surface, give a good watering and set away in a cool place, covering them with about five inches of sand or coal ashes. This prevents the bulbs from rising while the roots are growing and keeps them quite moist. In about eight weeks they may be taken to the room in which they are to flower. By bringing in a few pots at a time about two weeks apart a succession of bloom may be had.

CULTURE IN GLASSES.—The single varieties are best adapted for glass culture, and the best named sorts should be selected. Use soft water in filling the glasses, put in a little charcoal and allow the bottom of the bulb to just come in contact with the water. Keep in a dark, cool place until the roots are about six inches long, when they may be brought into light and warmth to bloom. Add water occasionally as it evaporates, and the nearer they can be kept in a temperature of 60° F. the better will be the results.

EARLY ROMAN HYACINTHS.

A charming class specially adapted for forcing and house culture, each bulb producing several graceful spikes of delicately perfumed flowers. They may be had in bloom from November to spring by early and successive plantings and treating as recommended for Hyacinths on page 2. Bulbs may be planted close together, and in pots and pans of 6 or more bulbs are very effective. *If desired by mail, add 10 cents per dozen for postage.*

All of our Bulbs are of the Highest Quality.

Crocus.

One of our earliest spring flowers, brilliant and universally admired, occupying a prominent place in every garden. When planted in large groups or lines of distinct colors the effect is striking. Flower beds and borders are made very attractive with a few clumps or rows of the different colors. They thrive in any soil or situation, but to be had in highest perfection they should be grown in a deep, rich, sandy loam, and a sunny location. Plant two or three inches apart and three inches deep. Best results are obtained from early planting.

MAMMOTH FLOWERING NAMED CROCUS.

These are large selected bulbs of the best varieties, and are noted for the immense size of their flowers and richness of color. *The small cheap bulbs we do not handle, as they fail to give satisfaction.*

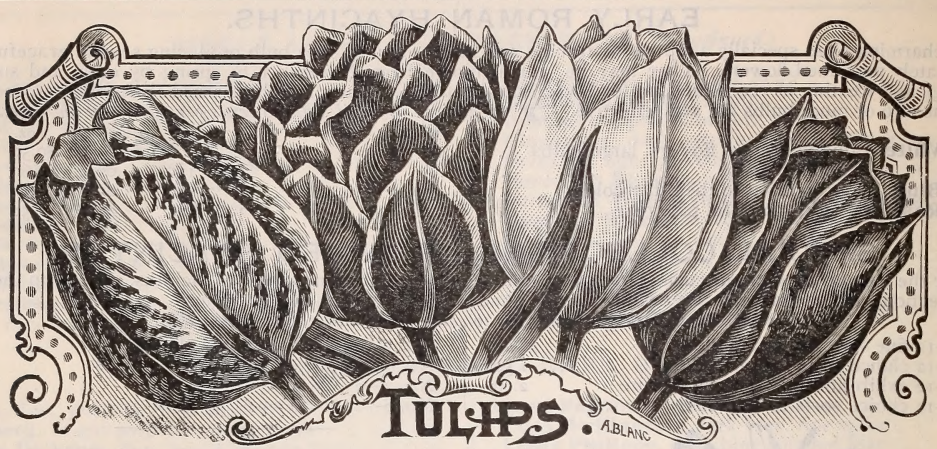
AUTUMN FLOWERING CROCUS. (*Colchicum.*)

Handsome hardy plants, very showy and effective in clumps, producing fine clusters of very large, beautiful flowers in September or October, followed by the foliage the next spring.

	Each	Doz.	Hund.
Colchicum Autumnalis, large, single, rosy purple	$0.05	$0.60	$4.00
Colchicum Autumnalis Album, large, single white	.10	1.00	6.00
Colchicum Autumnalis Plenum, double rosy purple	.10	1.00	6.00
Colchicum Agrippinum, large rosy lilac	.12	1.25	8.00
Colchicum Autumnalis, Mixed, large flowers of many shades	.05	.60	4.00



Universal favorites and always attractive from the beauty, brilliancy and variety of color, which make them one of the most popular flowers for early spring display in the garden, or for winter flowering in house and conservatory. They are extremely hardy, and of easy culture in any good garden soil, seldom failing to give the greatest satisfaction. Clumps of double and single sorts planted together among the shrubs and perennials will give a longer season of bloom than if either were planted alone. The bulbs should be set 3 to 4 inches deep and 4 to 6 inches apart. Culture as recommended for Hyacinths, page 2.

Narcissus or Daffodils.

Trumpet and Cupped Narcissus.

In the front rank of popularity is placed this most beautiful and fragrant of our flowering bulbs, doing well in almost all soils and situations—among the grass, under trees, and in shady borders. Once planted they need no further attention, as they multiply and give larger and finer results each year. For house culture they are equally desirable and should be treated as recommended for Hyacinths. They are all perfectly hardy, except the Polyanthus varieties, and these, with a good covering to exclude the frost, will give larger and better flowers than when grown inside.

CHINESE SACRED OR ORIENTAL NARCISSUS.

The Chinese Sacred Lily (*Narcissus Orientalis*) is of easy culture and readily brought into bloom when grown in water. Shallow dishes are used in which the bulbs are placed with enough fancy pebbles to hold them upright when in bloom. The flowers are mostly white with yellow or orange centers and very fragrant.

True Chinese Grown, extra large bulbs, 10 cents each, $1.00 dozen, original baskets of thirty bulbs, $1.75.
True Chinese Grown, selected bulbs, private strain, 12 cents each, $1.25 per dozen.

If desired by mail add 5 cents each for postage.

ACIDANTHERA BICOLOR.

Most valuable of all the Cape bulbs for beauty and fragrance of the flowers. They grow about two feet high with graceful flower stalks, each stalk having from four to eight beautiful creamy white flowers with a purple maroon blotch at the base of the petals. They may be forced in winter like gladiolus, but better results will be had by planting in the open ground about June 1, when they bloom freely during August and September. The bulbs *must* be kept very warm through the winter. Each, 25 cents; per dozen, $2.50.

ACHIMENES.

One of the finest summer blooming plants for house or conservatory, giving handsome flowers of many charming shades and colors.

Mixed varieties, 10 cents each, $1.00 per dozen. *Ready in January.*

AGAPANTHUS. (*African Lily.*)

Splendid ornamental plants for growing in pots or tubs for the lawn or piazza, bearing large clusters of flowers on long stalks, opening in succession for a long period during summer and autumn. They are rapid growers and gross feeders. Plenty of water should be given during growth and not allow them to become root-bound.

LILIUM HARRISII.

(Bermuda Easter Lily.)

One of the best for house culture. The flowers are trumpet shaped, pure waxy white, and delightfully fragrant. Bulbs should be potted in a rich soil, using 3 1-2 to 6 inch pot, according to size of bulb, and the pots plunged in a cold frame or kept in a dark, cool place, to get a strong root growth before the top starts; when well-rooted and started a few inches, shift into larger pots; they may be brought into gentle heat and forced into bloom. By bringing them in at intervals a succession of bloom may be had throughout the winter.

LILIES.

In the bulb garden Lilies rank first in importance. They are stately and beautiful, matchless in form and variety of color, while possessing the most agreeable perfume, and for general effect they have no rivals. Bulbs should be planted six inches deep as soon as they can be obtained after ripening, *some being ready in August while others are not ready till October or November.* They thrive best in a well drained, deep, loamy soil, made rich with thoroughly rotten cow or sheep manure, and an inch of clean sand placed under and over the bulbs when setting; manure should not come in contact with the bulbs as it causes decay. Top dressing is the better way to enrich the soil after the bulbs are once established. The beds should be well covered in the fall with any good litter that will exclude frost.

Fumigator. Perfection. For Smoking Greenhouses and Conservatories.

The neatest, most durable, and most practicable fumigator ever offered. By following directions this fumigator will last for years; it has practically three bodies, the two inside ones forming a water tank; this tank being between the fire and the outside body, it prevents the body from burning out.

The tank should be filled with tobacco water; when in operation a vapor arises and mixes with the dry smoke from the stems, producing a dampened smoke more dense and less injurious than any other fumigator made.

	Each.
No. 1 holds one peck of stems	$3.00
No. 2 holds half-bushel of stems	3.50
No. 3 holds three-quarters bushel of stems	4.00
No. 5 holds one and one-quarter bushels of stems	5.50

Glazier's Points, E. J. Van Reyper's. Will stop glass from sliding. The only durable and reliable points, made of steel wire and galvanized. No rights and lefts. Can be used on either side of the bar. Try our pincers for driving these points. Price, per box of 1000, .60c.; by mail, .75c. Pincers, .40c.; by mail, 50c.

Glazing Points. Siebert's. Made of zinc, they will not rust and will last many years. Made in two sizes, 5/8 and 7/8 inches long. Each size in one pound packages, 40c. per lb.

Mastica. For glazing greenhouses: elastic, adhesive and easy to apply, is not affected by expansion and contraction, and avoids the necessity of repeatedly reglazing, saving time and expense. One gallon will cover about 290 running feet (one side). Per gallon, $1.25; 1/2 gallon, 65c.; 1 qt., 35c.

Mastica Glazing Machines. Price, $1.00 each.

Imperial Liquid Plant Food, "Chemicals."

These "Chemicals" are dry mixed powders which dissolve easily in water making the IMP. Liquid Plant Food. This solution is then mixed with 50 times the amount of water and used as a compost. Such a chemical compost costs less than one-third cent per gallon.

Prompt in action, because, being liquids, they are immediately made use of by the roots of the plants to which they are applied. They are entirely free from the objectionable odor which characterizes most of the fertilizers of the latter class.

They are particularly valuable for flower fanciers and horticulturists. By their use you can obtain a faster and more permanent growth, finer flowers, and more luxuriant foliage.

Franklin Park Lawn Seed.

OUR SPECIALTY.

TRADE MARK REGISTERED.

The mixture of grass seeds we sell under this name is made from the identical formula used by the Park Commissioners of the City of Boston in their work of laying out the beautiful lawns and terraces which add such a charm to our new parks.

The Franklin Park Mixture gives a fine, smooth, velvety sward within a very few weeks after sowing. It is composed of clean seed of the finest and most desirable permanent grasses known, and it contains no chaff nor foul seeds. Weight per bushel, about 32 pounds.

The very large demand for this lawn seed has necessitated our having the name "Franklin Park" registered as a trade mark, in order to protect ourselves from imitators.

September and October are the most favorable months for sowing.

We put this seed up in packages—all of which bear our name—containing quantities as follows:

64 lbs., sufficient for one acre . . Price $15.00	16 lbs., sufficient for one-quarter acre Price $4.00
32 " " " one-half acre . " 7.50	Price per pound 30

FINEST ENGLISH MIXTURE.
